

Laurent Boulangerie

Braeside, VIC

Design, engineering and construction of a new bakery facility.

PROJECT DESCRIPTION

Total Construction worked with Laurent Boulangerie early in the process to provide a detailed scope to enable early demolition works to start immediately while detailed design was completed.

The internal fit-out of the site came with significant challenges and new innovative installation methods needed to be incorporated.

Scope of works included:

- Detail design of roof support columns to be incorporated into non-food manufacturing areas.
- Development of specification for structural/ civil works.
- Undertook Brownfield site works after plant and equipment installed.
- Managed both traditional building construction as well as manufacturing process equipment installation.

With the commencement of early demolition works, we were able to complete the design and provide innovative installation methods which enabled occupancy of the building with equipment commissioning and the launch of the product as planned.

This new state-of-the-art bread facility incorporates leading edge stone baked Artisan bread plant/ equipment technology which will ensure Laurent Boulangerie has the capacity to meet current and future production forecasts and growth strategies.

CLIENT

Laurent Boulangerie

PROJECT VALUE

\$4.8 million

CONTRACT

Design & Construct

COMPLETION

April 2012
